

EDUCATION

Vishwakarma Government Engineering College

CGPA: 9.04

B.E (Information & Communication Technology) (studying) | Graduation Year (2027)

TECHNICAL SKILLS

Programming Languages: Python, C/C++, JavaScript, Java**Machine Learning & AI:** Supervised & Unsupervised Learning, Deep Learning, NLP, Time Series Forecasting, Regression, Classification, Clustering, CNN, RNN, LSTM, Model Optimization**Generative AI :** Prompt Engineering, Retrieval-Augmented Generation (RAG), AI Agents
LangChain, LangGraph, Vector Databases, Embeddings**Frameworks & Libraries:** TensorFlow, Keras, Scikit-learn, NumPy, Pandas, Matplotlib**Data Analysis & Visualization:** SQL, Excel, EDA (Exploratory Data Analysis), Data Cleaning, Feature Engineering**Full-Stack & Deployment:** HTML, CSS, JavaScript, React, Node.js, Express.js, Django**Databases:** MySQL, MongoDB**Cloud & Tools:** Microsoft Azure, AWS (Basic), Git & GitHub, Jupyter Notebook, VS Code, PyCharm, IntelliJ**Coursework:** Data Structures & Algorithms, DBMS, Operating Systems, Probability & Statistics, Machine Learning

PROJECTS

EduTrack: Student Performance Monitoring System | HTML, CSS, Python, Django, MySQL

- Developed a data-driven full-stack web app to track and visualize student academic performance.
- Built dashboards, authentication, and analytics modules using Django and Python.
- Applied data preprocessing, visualization (Pandas, Matplotlib), and backend data pipelines for analytics.
- Enhanced usability and scalability through optimized storage, responsive UI, and modular architecture.

Google Stock Price Prediction using LSTM RNN | TensorFlow, Keras, NumPy, Pandas, Scikit-learn

- Built a deep learning model using LSTM to predict Google stock prices from historical time-series data.
- Trained on 60-day sliding inputs with stacked LSTM layers and dropout to reduce overfitting.
- Applied data preprocessing, MinMax scaling, and sequence generation using NumPy and Scikit-learn.
- Tuned Adam optimizer, MSE loss, 100 epochs, batch size 32 for improved accuracy.
- Visualized real vs predicted trends in Matplotlib to validate model performance.

Image Classification using CNN | Python, TensorFlow, Keras, NumPy

- Built a CNN from scratch to classify cat and dog images using TensorFlow and Keras.
- Applied data preprocessing and augmentation (rescaling, shear, zoom, flip) with ImageDataGenerator.
- Implemented convolutional, pooling, and dense layers to extract spatial features and improve generalization.
- Trained for 25 epochs with Adam optimizer and binary cross-entropy loss, achieving strong accuracy.
- Evaluated on unseen data and enabled single-image prediction for real-time results.

Sentiment Analysis with NLP | Python, NLTK, Scikit-learn, Pandas

- Built an NLP-based sentiment classifier to analyze restaurant reviews for positive or negative sentiment.
- Performed text preprocessing, tokenization, stemming, and stopwords removal using NLTK.
- Created features with a Bag-of-Words (CountVectorizer) model using 1,500 key terms.
- Trained a Gaussian Naive Bayes classifier on 1,000 reviews (80–20 split) with strong accuracy.
- Evaluated results via confusion matrix and accuracy score visualized in Matplotlib.

CERTIFICATIONS & AWARDS

IIT Gandhinagar National Level Hackathon Winner (2026)**Smart India Hackathon (SIH) Grand Finalist (DEC-2025)****Devang Mehta IT Academic Excellence Award (2024)** – First Rank in Information Technology**Supervised Machine Learning** – Stanford University & DeepLearning.AI Coursera (Instructor: Andrew Ng)**Microsoft Azure Data Fundamentals (DP-900)** – Certified in Cloud Data Pipelines and AI Integration**IBM AI Certifications:** AI Fundamentals, Getting Started with AI, Generative AI in Action
